FAST CONVEYOR SHIPMENTS

Fast conveyor shipments mean SERVICE and AVAILABILITY. These two keywords are a vital part of the Hytrol concept. The Hytrol Stockyard, where shipping conveyor orders originated in 1964, represents an ongoing symbol of Hytrol's commitment to this concept.

The past history of service from the Stockyard is proof of this commitment. Yet today, and in the future, the Stockyard will continue to be an even greater benefit to our customers.

We are constantly reminded of the importance of service and availability through advertisements. These two factors have been the main theme for many companies and their number one concern for maintaining a smooth and consistent relationship with their customers.

In today's economy, customers want their goods and services immediately. With the unstable interest rates, customers don't want to spend money until they have a need for a product; and then they want it immediately. This is what the Stockyard is all about. It provides a tremendous advantage for the conveyor customer.

Consider these benefits customers receive from

Hytrol's Conveyor Stockyard:

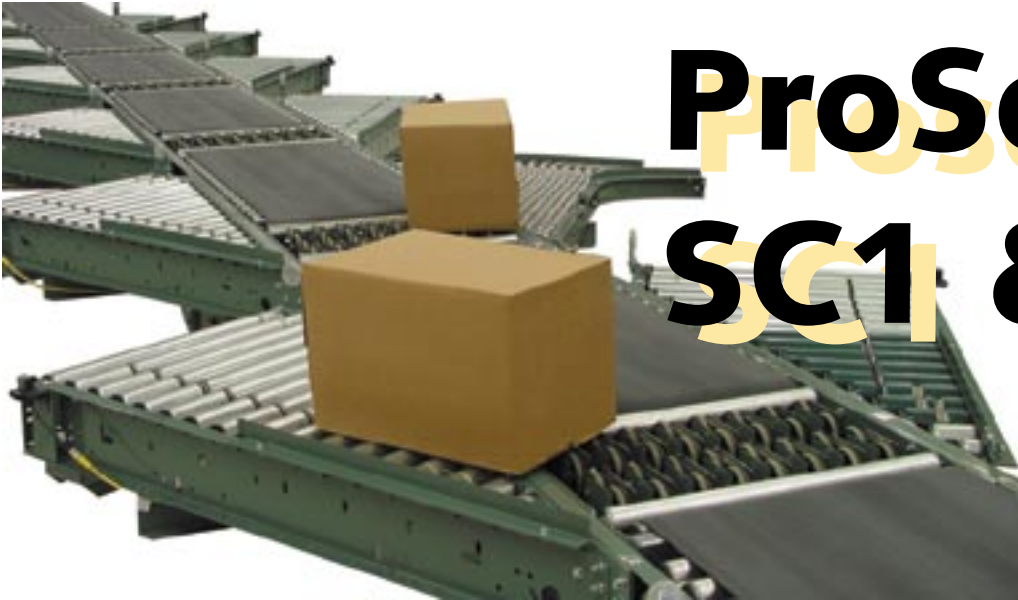

- Over 50 models in over 2200 sizes
- 24-Hour guaranteed shipment on all standard models, or we pay the freight
- No extra cost for this service
- Central location for easy access to all parts of the country
- Online order program so your orders can be processed quickly and shipped faster

No other manufacturer in our industry can match this service. However, we know we cannot become complacent. Hytrol will continue to add new conveyor models and accessories as industry demands dictate. We must also become more versatile and provide additional services as customers request... and still provide fast shipping service.

You must be assured that when you request Hytrol products, you can be confident that you'll be using the best equipment and the fastest conveyor shipments in the industry.

ProSort SC1 & SC2

Designed to replace the model SC family of sorters, the ProSort SC sortation conveyors fill the gap between low-rate pushers, plows, and pop-up diverters and the high-rate ProSort 100 and 200 series sorters. This sorter offers several advantages over previous technologies, including:

- **Continuous roller-bed frame.**
- **A single belt runs the entire length of the sorter. This belt transports cartons and drives the diverters and optional powered take-away spurs.**
- **High-speed components and a "split-bank" diverter control allow the sorter to be operated at higher speeds and with less gap between cartons, giving the ProSort SC the ability to operate at speeds up to 300 feet per minute and at rates up to 100 cartons per minute and higher (depending on carton size and mix).**
- **No chain or sprockets for low maintenance.**
- **Both single-sided diverting (ProSort SC1) and two-sided diverting (ProSort SC2) are available.**

- **More diverts may be driven from one drive.**

When your application requirements call for a reliable upper-midrange sortation solution, consider the ProSort SC family of sorters.

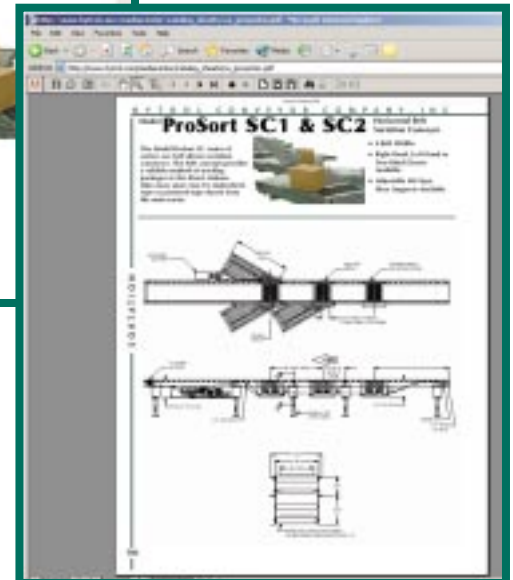

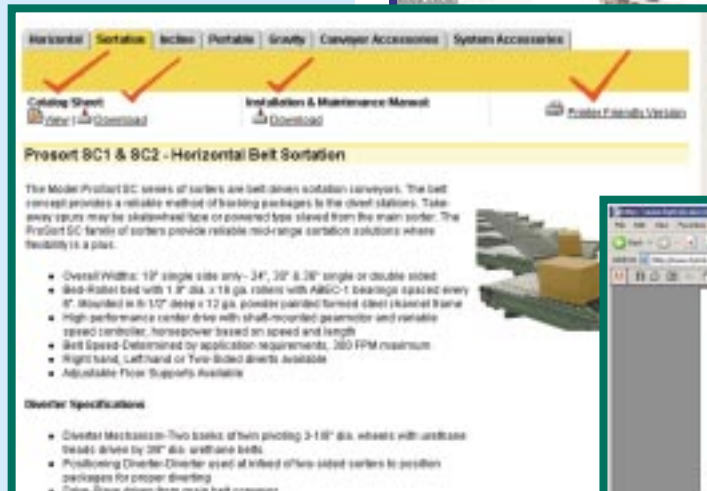

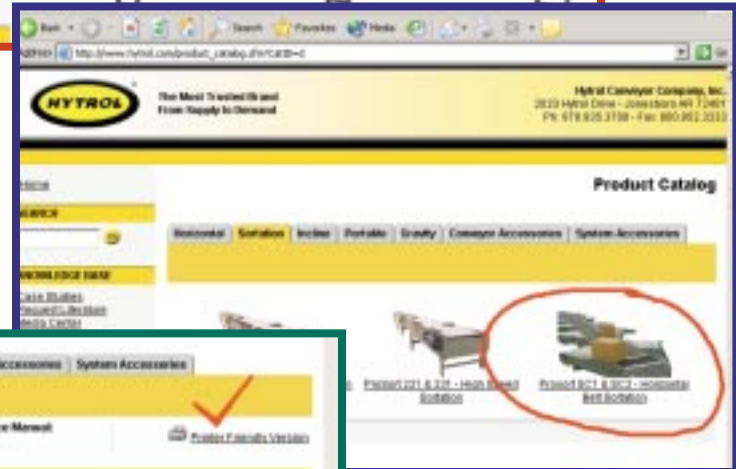

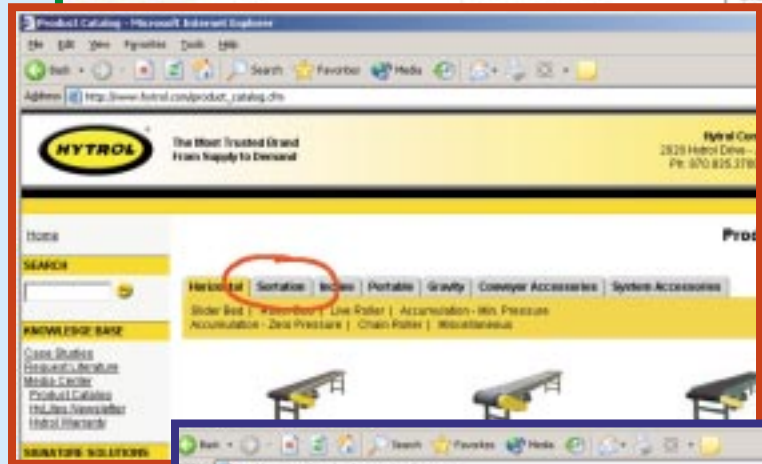

The Hytrol Model ProSort SC horizontal belt sortation conveyor provides a reliable method of tracking and sorting this company's direct mail packages. The sorters feed into seven Hytrol horizontal conveyor lines.

Exploring hytrol.com

• Product Catalog

Hytrol's product catalog is online to show you all our models and accessories; sizes available, standard equipment, options, availability, and drawings showing dimensional information and clearances. On the Hytrol.com main page, just click on "Product Catalog." You'll be taken to the product catalog page where you'll have choices that include "Horizontals," "Sortation," "Inclines," "Portables," etc. Under "Horizontals" there is a sub-heading that shows the different horizontal conveyors available such as "Slider Beds," "Roller Beds," "Live Roller," etc. For an example, click on the "Sortation" section. Here, you'll find the ProSort family of sortation conveyors. Click the ProSort SC1 & SC2. Another window will open showing you the basic information about this conveyor. If you would like more information on this unit, you can choose to either "View" the catalog sheet (using Adobe Acrobat), or "Download." The Installation and Maintenance manual is also available for you to download. There is also an icon for choosing a "Printer Friendly Version" if you need a hard copy.

HYTROL'S TEAM-UP FOR QUALITY PROGRAM HELPS EVERYONE

As part of the ongoing Team-Up for Quality series, Hytrol recently welcomed an installation supervisor from one of Hytrol's conveyor distributors. With Team-Up for Quality, we invite those who buy, install, service, and use Hytrol conveyor to come to Jonesboro and talk to our employees. We get to hear first-hand what we do well – and what we need to improve upon – from the people whose livelihood is handling Hytrol conveyor after it leaves the plant.

The installation supervisor who visited recently has over nine years experience with convey-

ors and has an appreciation of most all the major conveyor brands. He was complimentary of Hytrol's product designs and the speed with which Hytrol conveyor can be installed. He commented on the improvements he has seen in our crating practices and the way that components are organized and packed. The Installer also said our NSP conveyor was much easier to install since we upgraded the design.

He offered up several opportunities for us make his job easier at installation.

We are using our Team-Up for Quality speakers as a resource to advise us in making changes in the way we build and ship our products. This program not only helps Hytrol, it also helps insure our customers are getting quality products and services from Hytrol.
